Assignment 2 Task 3
May 13th, 2020

First of all here is my github link

https://github.com/zacharyPan/zhengyuPanBUSA8090_A2T3

Please check code on github instead of copy and paste from pdf.

Question 1

Part a,

The author tried to combine `mi_counties` into `mi_census` (left join) by using “country” from `mi_census` equal to “id” from `mi_counties`. That way, author could access all the information with countries in `census_counties`.

Part b,

The author tried to connect map with wdi database, using country code. that way, the author could showed all wdi information on a map.

Question 2, (question2.R on github)

Citation,

(*As_tibble Function | R Documentation*, n.d.)(*First Line of Every R Script?*, 2017)(“Select & Rename R Functions of Dplyr Package (2 Examples),” n.d.)

```
# Assignment 2 Task 3
# BUSA8090
# Author, Zhengyu Pan
# May 13th, 2020

rm(list = ls(all = TRUE)) # clear all
                          # additionally do shift + control+ F10
                          # to clean up the libraries

library(WDI) # assume that WDI is installed
library(ggplot2) # assume that ggplot2 is installed
library(dplyr) # assume that dplyr is installed
```

```

library(maps)    # assume that maps is installed
                  # it seems that we don't need this library, but
                  # I will leave it here anyway
library(countrycode) # assume that countrycode is installed
library(UserNetR)    # assume already did
                  # install_github("DougLuke/UserNetR")
                  # install.packages("UserNetR") will NOT work
library(sna)        # assume sna is installed

# question 2 part a
wdi_data <- WDI(indicator=c("NY.GDP.PCAP.PP.KD", "EN.ATM.CO2E.PC"), start =
2010, end = 2010, extra = TRUE)
wdi_data = as_tibble(wdi_data)
wdi <- wdi_data %>% rename(GDPpercap = NY.GDP.PCAP.PP.KD,
Emit_co2percap=EN.ATM.CO2E.PC)
dat_map<-map_data("world")
dat_map$ccode <- countrycode(dat_map$region,origin = "country.name",destination =
"wb")
wdi$ccode<- countrycode(wdi$country, origin = "country.name", destination = "wb")
merged <-full_join(dat_map, wdi, by="ccode")
ggplot(merged, aes(x=long,y =lat, group = group, fill= Emit_co2percap))+geom_polygon()

# question 2 part b

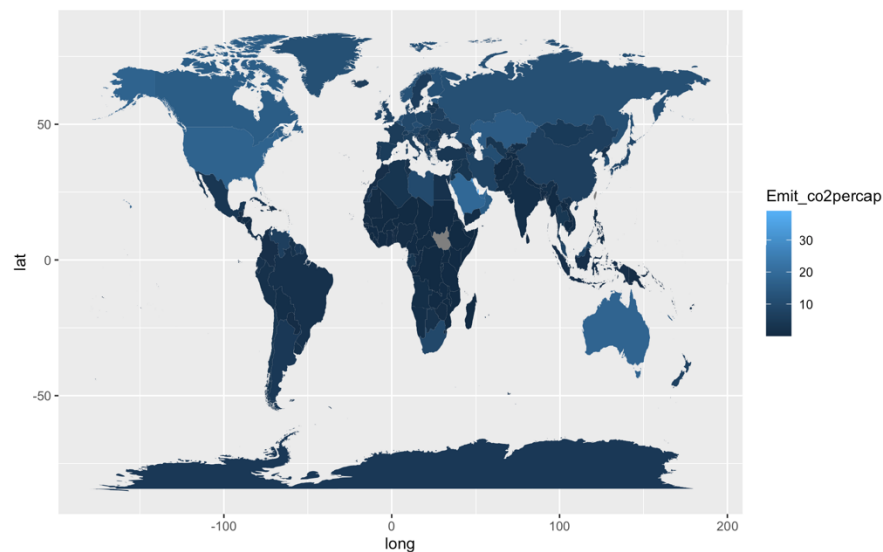

data(Bali)
op <- par(mar = c(0,0,0,0))
plot(Bali,displaylabels=TRUE,label.cex=0.8,pad=0.4,label.col="darkblue")

# question 2 part c

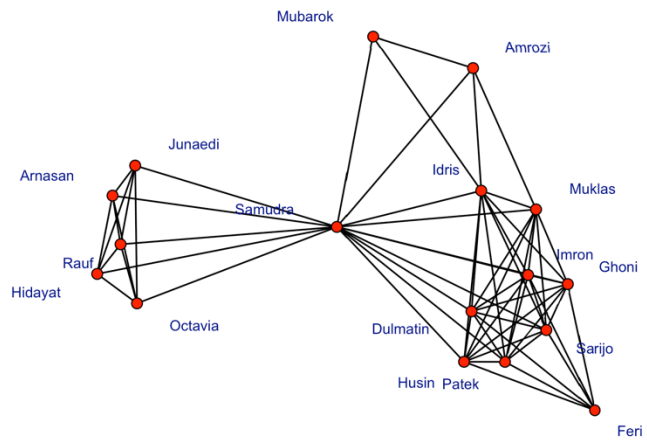

rolelab <- get.vertex.attribute(Bali,"role")
plot(Bali,usearrows=FALSE,label=rolelab,displaylabels=T,label.col="darkblue")

```

Part a

Part b

Part c

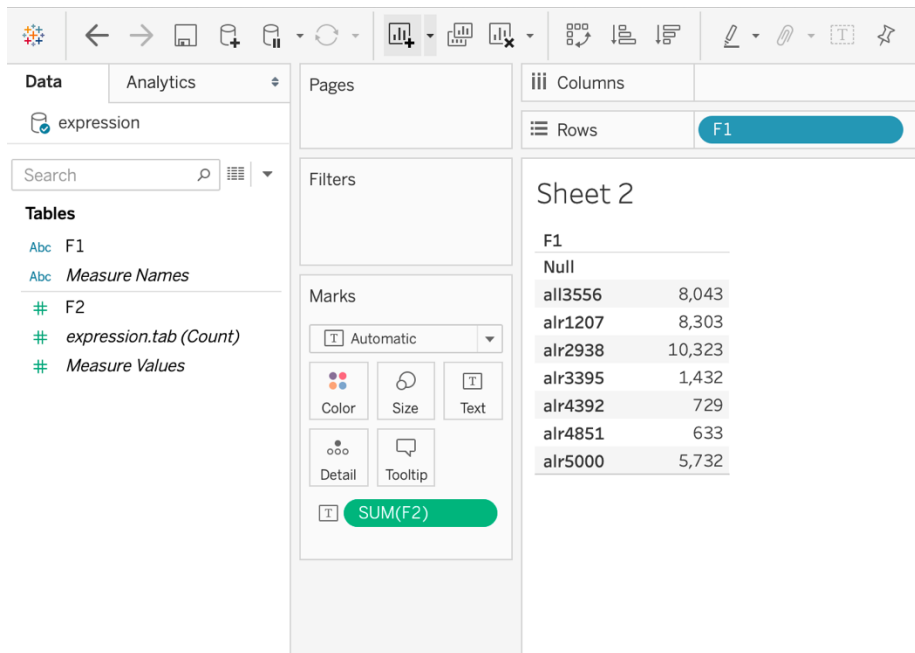

Question 3 (question3a.twb question3b.twb question3c.twb)

Please use the data I upload on github to check, since annotation.tab I need manually add header to make it work

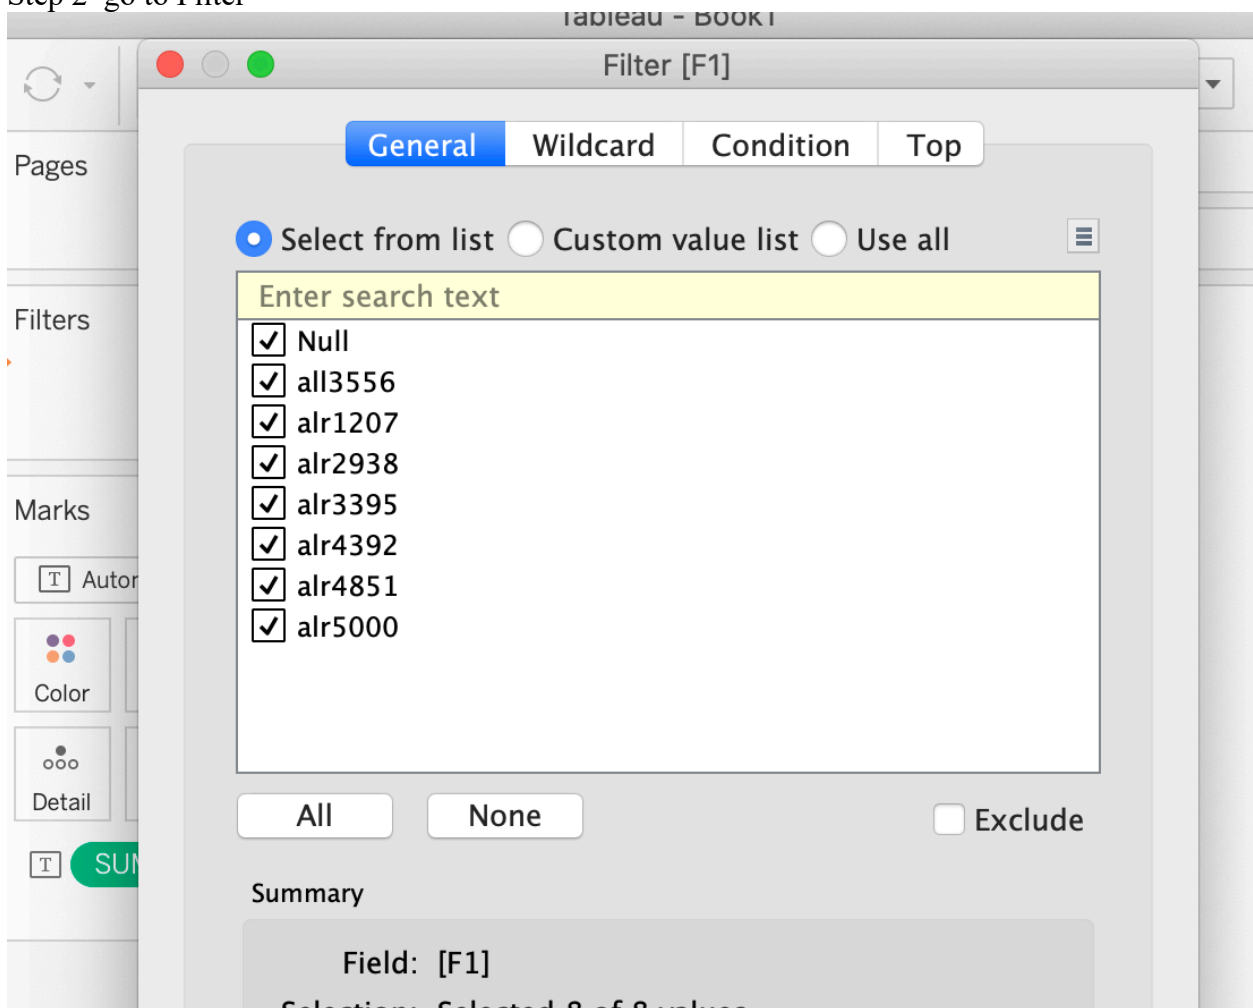

Citation,
(Using “CONTAINS” Function to Filter for Certain... |Tableau Community Forums, n.d.)

Part a,

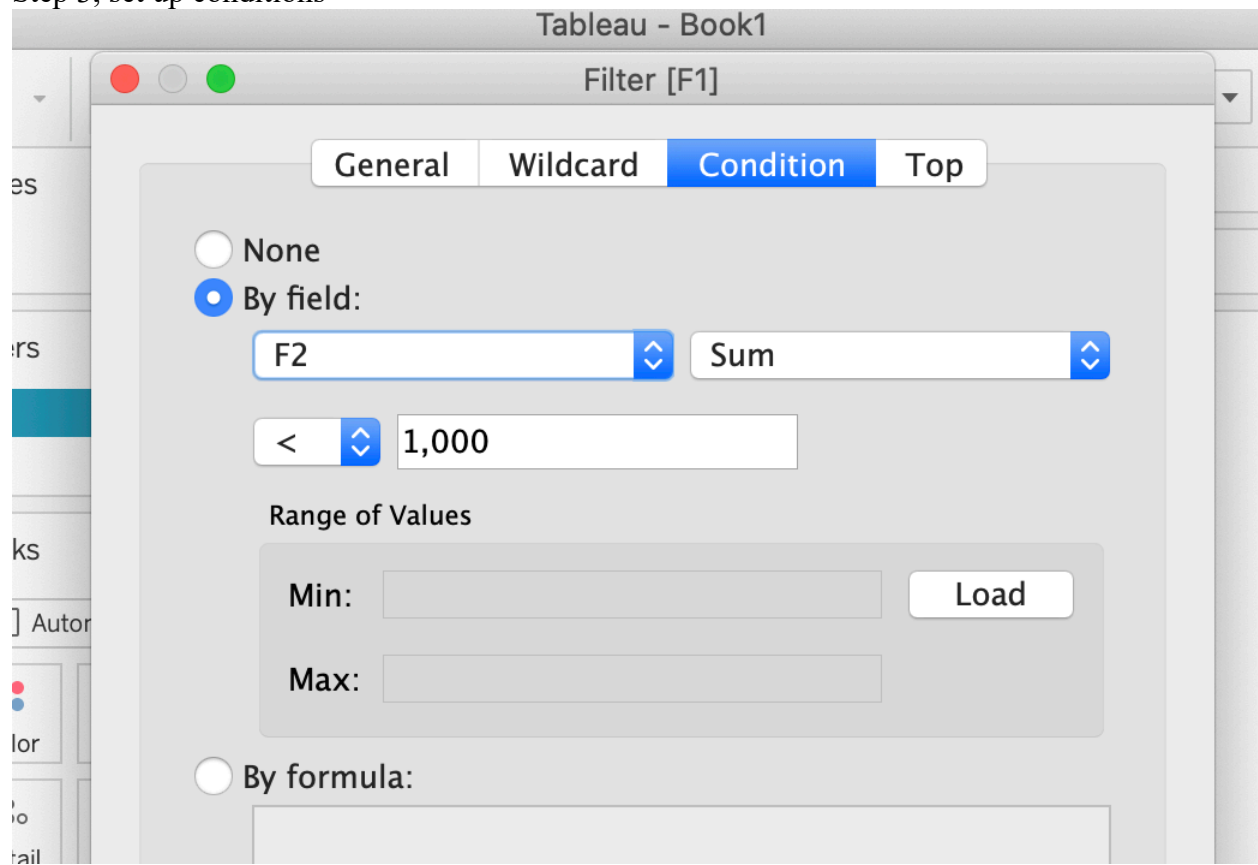

Step 1,

Step 2 go to Filter

Step 3, set up conditions

Step 4 result

Pages

Filters

Marks

Columns

Rows

Sheet 2

F1	
alr4392	729
alr4851	633

Automatic

Color

Size

Text

Detail

Tooltip

SUM(F2)

Part b,

Step 1, I need add a header manually, so it won't use any real data as header

Step 2

Filter [C2]

General Wildcard **Condition** Top

☐ None

☐ By field:

C1 Count

= 0

Range of Values

Min: Load

Max:

☒ By formula:

`CONTAINS([C2], "ase")`

Step 4

The interface shows a sidebar with 'Filters' (C2), 'Marks' (Aut..., Co..., Size, Text, De..., To...), and a main table area. The table is titled 'Sheet 1' and contains 6 rows of data. The columns are C1, C2, C3, and an unlabeled column.

C1	C2	C3	
alr3395	adenylosuccinate lyase	Purine biosynthesis	Abc
alr5000	CTP synthetase	Pyrimidine biosynthesis	Abc
alr2938	iron superoxide dismutase	Detoxification	Abc
alr4851	preprotein translocase su..	Protein and peptide secre..	Abc
all3556	succinate-dehydrogenase	TCA cycle	Abc
alr1207	uridylate kinase	Pyrimidine biosynthesis	Abc

Part 3,

Step 1 after load data like part 2

The context menu for column C3 is open, showing the following options:

- Filter...
- Show Filter
- Show Highlighter
- Sort...
- Format...
- ✓ Show Header

Step 2

General

Wildcard

Condition

Top

☐ None

☐ By field:

C1

Count

=

0

Range of Values

Min:

Load

Max:

☒ By formula:

```
CONTAINS([C3], "Pyrimidine biosynthesis")  
OR CONTAINS([C3], "Purine biosynthesis")
```

Step 3

C1	C2	C3	
alr1207	uridylate kinase	Pyrimidine biosynthesis	Abc
alr3395	adenylosuccinate lyase	Purine biosynthesis	Abc
alr5000	CTP synthetase	Pyrimidine biosynthesis	Abc
